Innovation and Environmental Affairs

The Innovation and Environment department supports you with know-how across various technologies in the field of high technology. The portfolio comprises exposure consultation, project management, event organisation and policy consultation.

Innovations define the potential of a company. For the research, development and marketing of new products, new operations and services you need partners. The CCI links up regional suppliers and users. We provide information about trends, promotional opportunities and bring you together with the right people.

Make the most of these opportunities and speak to us!

Have a look through the following brochure to learn more about our activities.
