

Virtual and augmented reality training platform

Pandemic accelerates using of augmented & virtual reality solution to secure seamless flow processes. Every aspect of Industry, Business, Education adapts to the new realities. Our answer to this global demand is VR platform - **BellVR**. It's a platform adapted to the new reality of education, training, services, it's a place where you can transfer all the knowledge to your employees, conduct remote instruction or service, a place where you can learn in safe and controlled conditions. Everything you need in your daily work.

BellVR guarantees easy, accessible, secure and an interactive training or learning process, which ensures engagement and allows for continuity of operations and processes in changing work environment.

How it works in practice

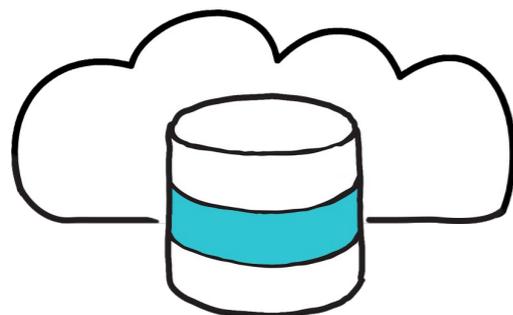

Two applications, one trainer, multiple training groups

How does it work in practice

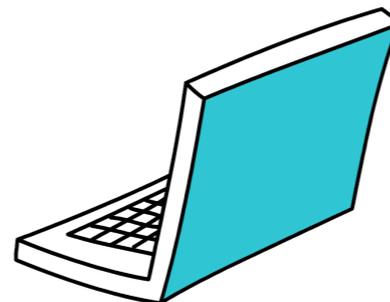

Web platform

Designed to manage the whole training process in the company - it allows you to schedule meetings, plan presentations, manage users and add new presentations.

Host PC app

Designed for the presenter - he/she can control the presentation, follow where are the participants in the virtual reality and answer their questions.

VR headset app

Users immersed in virtual reality can observe the intended interactions, ask questions, look around and walk around the object.

Benefits of using BellVR platform

SAFETY - ELIMINATION OF ACCIDENTS, DAMAGES

Transferring training to virtual reality allows you to eliminate situations in which unskilled workers, engineers, students etc. have direct contact with devices / machines that may cause an accident or damage the device.

SAVING TIME & MOBILITY

BellVR allows you to conduct training anywhere, without the need to access the device / machine, without need to stay in training rooms. The training can be done in the home space.

INCREASING THE COMPETENCES AND MINIMIZING EMPLOYEE ERRORS

The possibility of repeating the learning process many times guarantees better mastery of competences, which translates into the elimination of mistakes in practice, and the interaction and exchange of experiences supports the learning effect. In addition, the AI system controls whether the entire learning process is carried out correctly so as to eliminate errors in the real environment.

REAL SAVINGS

- without the need for a DEMO version of the machine / device etc.
- elimination of accidents/ machine damage
- minimizing errors /increasing competences
- adaptation to the individual needs of the company
- taking training / learning in any space

INTERACTIVE COMMUNICATION

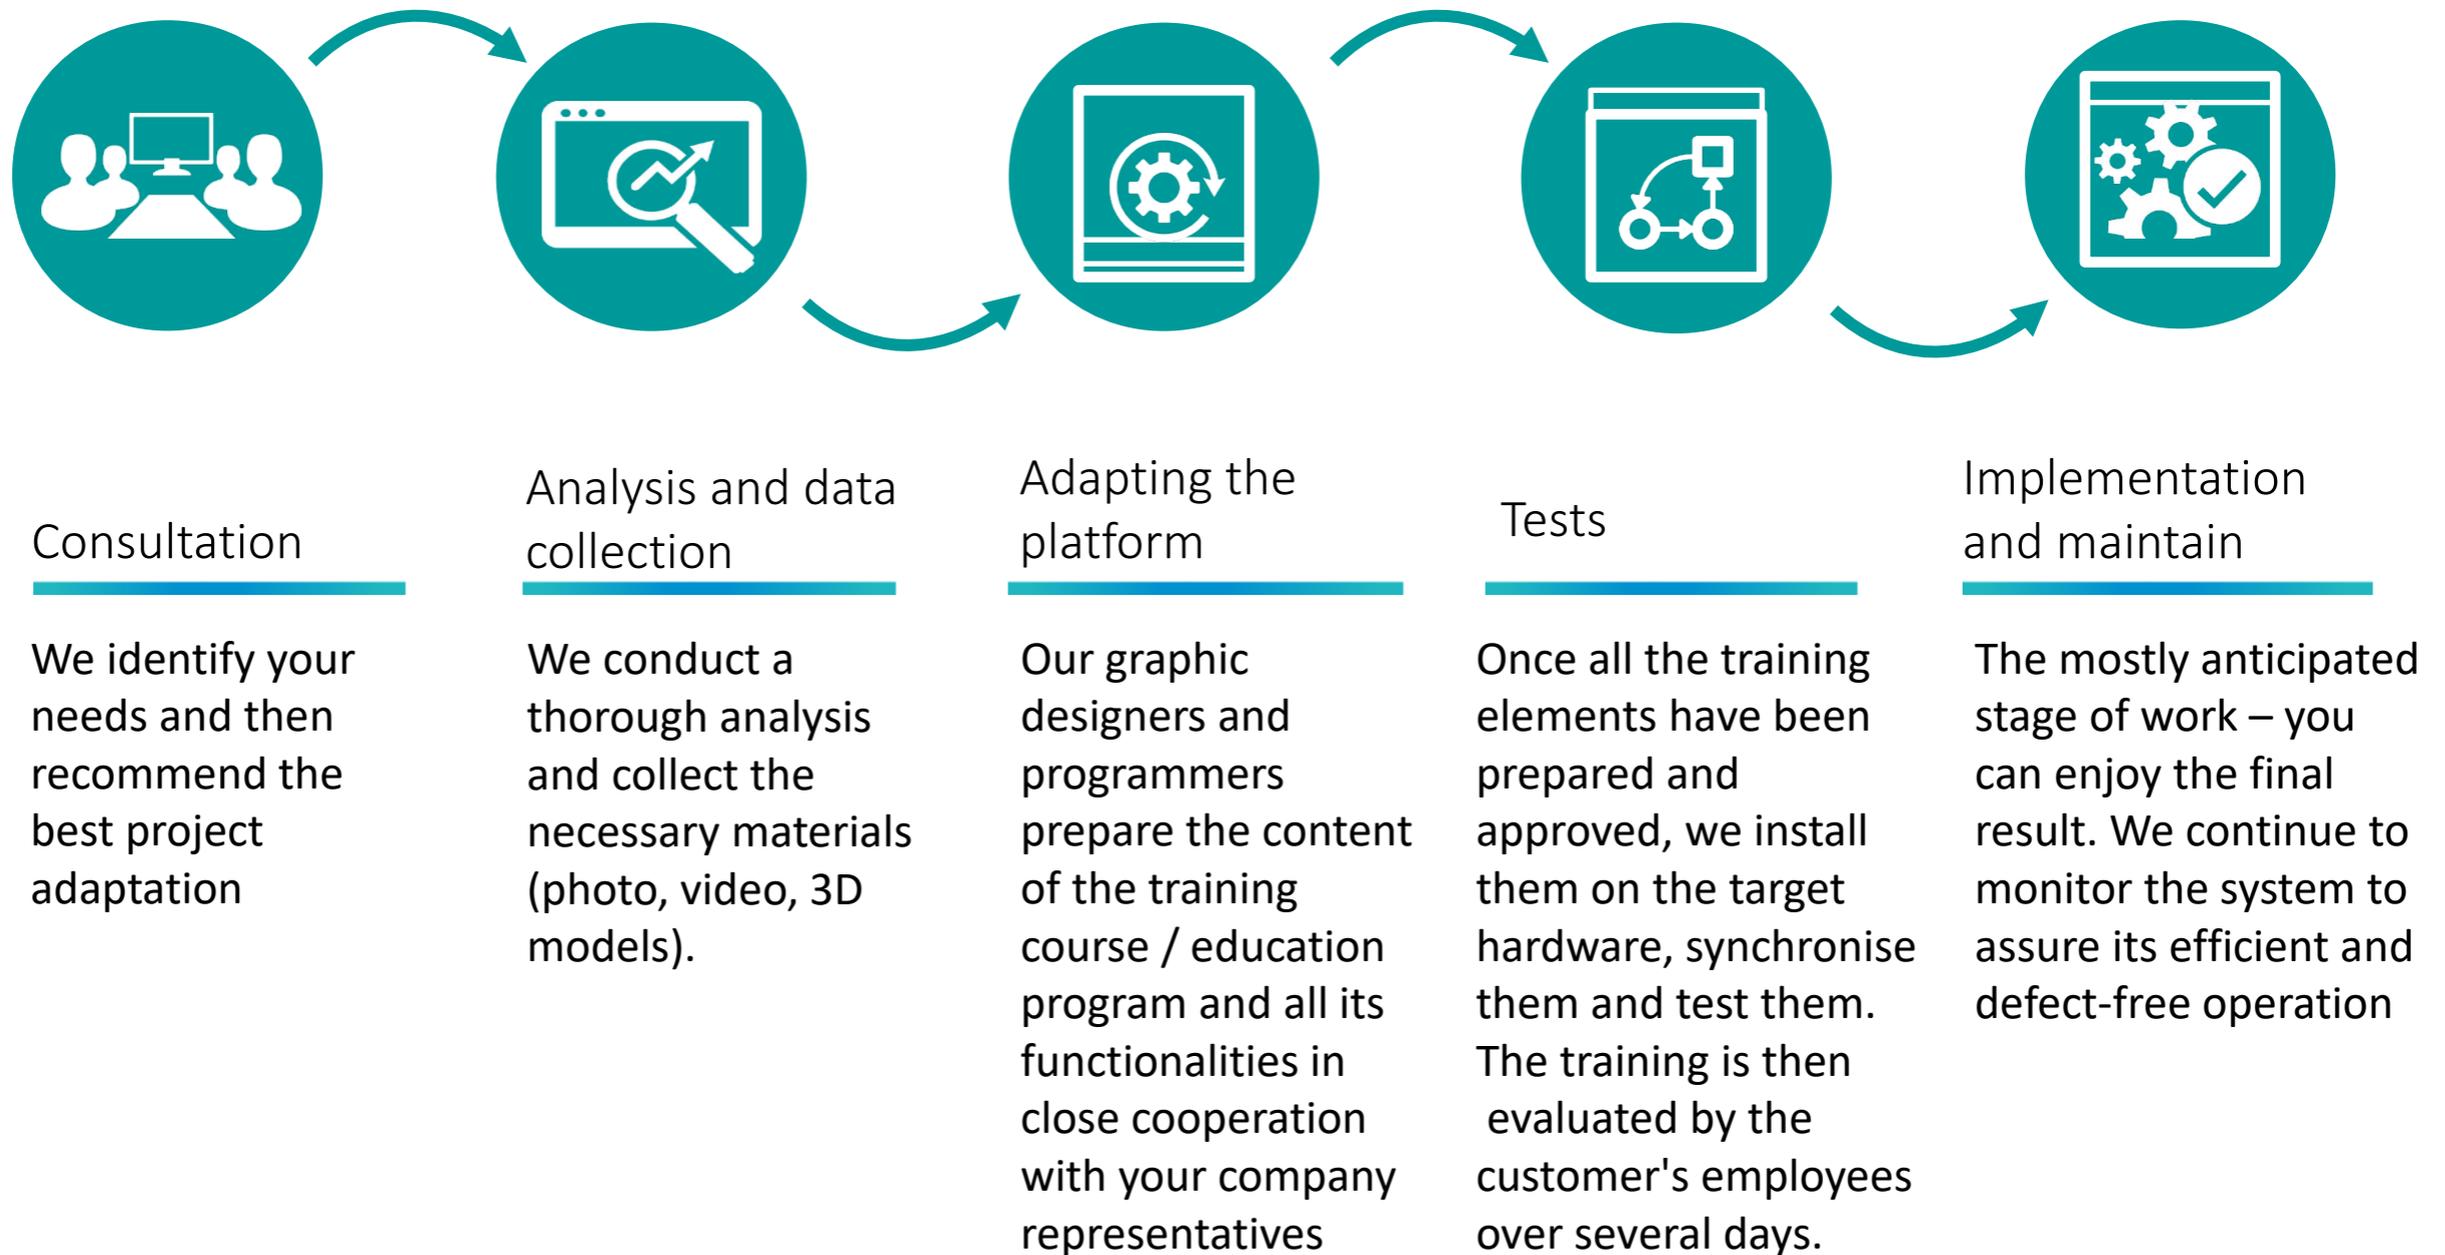

The platform gives the possibility of full interaction with the trainer, asking questions, an individual approach without having to stop the group in the training process. All in a safe and engaging manner.

REPEATABLE SIMULATION AND FAMILIRISATION WITH THE OBJECT

Faithful mapping in the virtual space and repeatable simulation of activities guarantee the user to get acquainted with the object in an interactive and engaging way.

How looks the process of implementation

We are happy to answer all your question and guide you through the virtual World.
Stay with us!
